

CS 113a - Introduction to Computing

Challenge #2: Basic xhtml Application

- The picture below is the code for my planned website, this is only temporary cause I will still edit this website.
- It displays the basic xhtml tags in relation to my planned website. It also demo the basic part of the html sections.

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>
5       DASCEL CAKES | HOME
6     </title>
7   </head>
8   <body>
9     <style>...
49 </style>
50
51 
52
53 <h1>DASCEL CAKES
54   <br>
55   BAKESHOP
56 </h1>
57
58 <p>Even though we are constantly faced with the rush of <br>
59   modern life, we can still experience precious moments <br>
60   in which we feel as if the time stopped. These moments are <br>
61   dedicated to small everyday things, such as enjoying the <br>
62   smell and taste of freshly baked bread from Dascel Cakes Shop.</p>
63
64 <button>
65   <a href="https://www.pekara-dubravica.hr/en/" target="_blank">FIND OUT MORE</a>
66 </button>
67 </body>
68 </html>
```

- And this is the output of what I coded above.
