

CS 113a - Introduction to Computing

Challenge #5: Implementation of head tags

For this challenge I implement head tags in the HTML `<head>` element containing the following elements: `<title>`, `<style>`, `<meta>`, `<link>`. The codes is in the picture below.

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>
5       DASCEL CAKES | HOME
6     </title>
7     <link rel="stylesheet" href="stylebasichtml.css">
8     <link rel="icon" type="image/x-icon" href="dascel_logo.png">
9     <meta charset="UTF-8">
10  >
11  <style>...
50  </style>
51 </head>
52 <body>
```

The output of this is still the same.
